

Veidekke implements BIMeye in SEB

Customer:

Veidekke building for SEB Bankk Sweden

Challenge:

The handling of nearly 10.000 doors and room descriptions for many rooms.

Solution:

The BIMeye apps with userfriendly interface, modern technology and capability to handle a variety of functionalities.

Tool:

BIMeye Door Manager and Room Manager.

VEIDEKKE is implementing BIMeye Room and Door manager apps to manage 10.000 doors and several 1000 rooms in a large office building in Arenastaden, Stockholm.

Fabege is one of Sweden's leading property companies. In their construction of the new office building for the Swedish Bank SEB in Arenastaden, Stockholm, the contractor Veidekke, has chosen apps from BIMeye as their preferred tool for working in the cloud.

With 2 projects on their own and 2 with Arcona, this is the fourth time Veidekke chooses BIMeye. In this new project, there will be plenty of assets to handle, as it is a new office building for 4400 employees.

With 90.000 m2 it is a considerable project. By implementing the BIMeye apps, Door Manager and Room Manager, the handling of nearly 10.000 doors and room descriptions for many rooms, the time spent on this management will be optimised and easy to follow. The project will allow a large group of the consultants involved to be able to gain access simultaneously all through the realisation of the project.

User-friendly interface and a broad range of modern functionalities in BIMeye made the difference

When deciding on a cloud solution, there were other cloud services to choose from. However, Veidekke chose BIMeye. This was, above all, due to its user-friendly interface, modern technology and capability to handle a broad range of functionality.

The project will be made in 3D models for Virtual Design and Construction (VDC). A methodology that integrates virtual models and facilitates the involvement of different disciplines in the design and production to create short and effective decision-making. Today, Veidekke is the one of the market leading companies within VDC in the World.

Christina Engerup, construction manager at Veidekke explains more:

"In order to be able to cover these many areas, a cloud solution as BIMeye, which can cover some of the areas, is necessary. We are happy to have found these apps and we are looking forward to a smooth cooperation."
